

# When is the **best time** to water?

Watering in the early morning (between 4 a.m. and 8 a.m.) saves money and water, while keeping your grass, plants and trees healthier.

Watering early when the sun is low and winds are calm:

- Helps reduce water loss from evaporation due to heat and wind.
- Improves soil absorption so water and nutrients get to plant roots, where it's needed most.
- Helps prevent water runoff that eventually enters the ocean.

Always follow local watering guidelines and restrictions.

# Take Control of Your Sprinkler System!

**WEATHER-BASED IRRIGATION CONTROLLER REBATE PROGRAM:** Take control of your sprinkler system by installing a weather-based irrigation controller. These controllers use information about your plants, soil, and weather conditions to give your landscape the right amount of water.

**Current Rebate Level: Single-Family Residences: Up to \$425 per residence; Multi-family Residents and Businesses: \$25 per station (up to timer capacity)**

**ROTATING NOZZLE REBATE PROGRAM:** Reduce water runoff and overspray by replacing your sprinkler heads with water-efficient rotating nozzles. Rotating nozzles water more evenly and uniformly, and they can reduce your outdoor water consumption by up to 30%.

**Current Rebate Level: \$4 per nozzle.**
